Why is my guided access not working?

Guided access is a feature on iOS devices that allows users to restrict access to certain app features or content. It can be used to prevent accidental in-app purchases, to disable app features that may be distracting to children, or to prevent access to certain sensitive data.

There are a few possible reasons why guided access might not be working correctly on your device.

First, make sure that guided access is enabled in the Settings app. Go to Settings > General > Accessibility > Guided Access and make sure the feature is turned on.

If guided access is already enabled, the next step is to check if there are any restrictions placed on the app you're trying to use. Go to Settings > General > Restrictions and make sure that any app-specific restrictions are turned off.

If you're still having trouble, it's possible that there is a problem with the app itself. Try deleting and reinstalling the app, or contacting the developer for assistance.

Is there a way to fix my guided access so it will work?

There may be a way to fix your guided access so it will work, but it is not guaranteed. First, you should check for any updates to the iOS software that may be available, and install them if necessary. Next, you should restart your iPhone and try using guided access again. If that does not work, you may need to reset your device to its factory settings and then try using guided access again. Please note that resetting your device will erase all of your data, so you should back up your data first.

Why would my guided access stop working?

There are a few different reasons why your guided access may stop working. The most common reason is that you have updated your iOS device to a new version that is not compatible with your current app. Another possibility is that you have changed some of your device's settings, which can also interfere with the app's functionality. Finally, it is also possible that the app itself has been updated and is no longer compatible with your device. If you are experiencing any of these issues, we recommend contacting the app developer for further assistance.

What do I need to do to get my guided access to work again?

If you're having trouble getting your guided access to work, there are a few things you can try. First, make sure that the feature is turned on in your Settings. Then, check to see if there are any app-specific settings that need to be enabled. Finally, if you're still having trouble, you can try restarting your device.

If you're still having trouble after trying all of these things, you may need to contact Apple support for help.

Is there a reason why my guided access is not working?

There could be a few different reasons why your guided access is not working. One possibility is that you do not have the correct permissions set up on your device. Another possibility is that there is a problem with the app itself.

If you do not have the correct permissions set up, you will need to go into the Settings app on your device and give the app permission to use the features that you want to use. To do this, first select the app that you want to use from the list of apps. Then, select the "Permissions" option. From here, you will be able to enable or disable the various permissions that the app has. If these steps do not solve the problem, another possibility is that there is a problem with the app itself. In this case, you may need to contact the developer for assistance.

How settings affect your guided access app features should be a few things you need to check. If you're still having trouble, you may need to contact Apple support for help.

-Another potential cause is that you are trying to use guided access with an external display. Guided access does not work with external displays.

-Finally, it is also possible that there is a hardware issue with your device. If your device is damaged, or if the guided access feature is not working properly, it may need to be taken to an Apple Store or an authorized service provider for repair.

Is there a way to troubleshoot my guided access issue?

If you are having difficulty using Guided Access with certain apps or features on your device, there are a few things you can try to troubleshoot the issue. First, make sure that Guided Access is enabled in the Accessibility settings.

Guided access will suppress some of the normal functions of your phone in order to allow you to have full access to the device and its features. This can potentially drain the battery more quickly, but it depends on how often you use these suppressed features.

How to fix iCloud lost mode on iPhone or iPad?

1. Open the iOS device (iPhone or iPad) and go to Settings. 2. Tap on "General" followed by "Accessibility" and turn off guided access. 3. If the issue hasn't fixed by this, you need to use the next method to solve it. Method 4. Exit Guided Access using iCloud Lost Mode

Guided access is not working on Ipad pro ...

Looks like no one's replied in a while. To start the conversation again, simply ask a new question.

I have turned on guided access on settings, but it seems like it doesn't turn on, why is this? I have tried multiple times to get it work, from changing language settings to everything man could imagine.

My home button on the iPad Pro 10.5 is working, it opens all the apps running view, as exits applications when pressed. So I thought this would be a software problem?

https://youtu.be/IBvyQ_PWuQQ Here is a video showcasing the issue. (the home button doesn't sound like that in it btw)

iPad Pro, iPadOS 14

Jun 11, 2021 9:22 AM in response to Kalags

Hello Kalags,

Thank you for using Apple Support Communities. It's our understanding that Guided Access doesn't work as expected on your iPad Pro. You've come to the right place! We're happy to help.

If you haven't already, make sure that your iPad has the latest software.

Update your iPhone, iPad, or iPod touch

If the issue persists, restart your iPad. Restarting can resolve many unexpected behaviors.

Restart your iPad

If you're still unable to use Guided Access, tell us if the issue occurs with all apps. Please include any other troubleshooting steps that you have tried.

Have a nice day!

Guided access is not working on Ipad pro 10.5

Why Is My Guided Access Not Working For iPhone/iPad? [FIX]

One of the major reasons why people love to go for Apple products is how it enhances user productivity exponentially. While its design and software are worth praising for this achievement, Apple also has many unique features to offer to the common masses to enhance their user experience.

One such feature is guided access. This feature is present in both iPhones and iPad and ensures that there is no distraction thrown at the user while carrying out a certain task. However, as much as Apple works hard to provide a great user experience – there are times when the features stop working.

If the guided access feature in your iPhone or iPad has come to a halt, keep reading this article to find out why it happened and how to fix it.

How To Use Guided Access Feature?

There can be various reasons why the guided access feature can be useful for you. For instance, if your child uses your iPhone or iPad a lot – you might want to make sure that the exposure to certain elements of the device is limited.

Apart from that, you might even have to give your device to someone else for a brief period for work. In such a situation, the person might go through your unlocked phone and steal private information. To prevent this, guided access

disables screen sharing. Here is a step-by-step guide on how you can enable this feature on your phone:

Step 1: Go to the settings section of your device, and then to the general menu section. Tap on the accessibility option there and you will be directed to the screen of guided access.

Step 2: Now comes the tricky part. Using the tip of your finger, tap around the area of your phone that needs to be restricted.

Step 3: Tap on the start button, and activate the guided access. If you circle an area to restrict by mistake, you can undo it easily by tapping on the cross icon.

It is understandable to get overwhelmed if your guided access stops working. After all, the thought of someone going through your private data is terrifying! However, you do not need to worry as there are several ways through which you can fix this issue on your own.

Solution 1: Restart

The first solution that you should try out is the old classic restarting of the device. Once the ios device is rebooted, minor issues get solved themselves and chances are that your guided access would start working immediately after the device turns on.

Hold the power button of your apple device until the restart or switch-off screen appears. Slide the screen to the right to restart your device. If plain restarting does not solve your problem, you can hard reset your device too.

Solution 2: Disable

If the feature of guided access is not working properly, it is best to disable it and then enable it again. While the process of enabling this feature has already been discussed above, here is how to disable the guided access feature on your Apple device:

- Step 1: Click on your home button thrice. Your device would redirect you to the guided access screen where you would be asked to enter the passcode. If you have faced a passcode, tap on the home button only twice.
- Step 2: enter the passcode correctly. After that, tap on the end option.

Solution 3: Reset

Sometimes, restarting or rebooting the device is not enough to solve an issue. In such cases, resetting your iOS device is an option that you can consider – provided you have already backed up important data before taking this step. We have a detailed guide on how to factory reset and iPhone that you can checkout. Follow these steps to reset the device:

- Step 1: go to the settings menu on your device.
- Step 2: tap on the option of general settings
- Step 3: on the new screen, tap on the option of reset.

Solution 4: Repair the System

There is another method to fix your issue of guided access not working without erasing any data on your device. You can contact your nearest apple store for it or do it yourself through third-party applications such as Tenorshare ReiBoot.

FAQs

1. Why is guided access not working?

Ans. Even though iPhones and iPads work pretty efficiently, they can break down from time to time without any explanation too. Hence, if the guided access feature of your device is not working, it might simply be some technical issue.

2. Why is guided access grayed out?

Ans. Guided access text may be greyed out because the feature is already turned on.

3. Why won't guide access work on my iPhone?

Ans. Any small technical issue might result in the faulty functioning of the guided access feature. You can try to restart the device to fix it.

4. How do I reset my Guided Access app?

Ans. You can reset the guided access app by either disabling it through the accessibility menu or changing the passcode through the passcode settings of guided access.

5. Why is my triple-click on my iPhone not working?

Ans. Make sure that you only use the triple-click feature when you have a proper passcode to enter. If you have, say, facedID for a passcode a triple click won't lead you to the guided access. You need to double-click in this case.

6. Will guided access turn off if the phone dies?

Ans. Yes, guided access turns off if the phone dies.

7. How do I get my phone out of guided access without a passcode?

Ans. Go to settings and then to accessibility. Tap on the option of guided access, and then go to passcode settings. Enter the new password. Apart from this, you can also restart the phone to turn off the feature.

8. How do I unlock my iPhone from guided access?

Ans. You can unlock your iPhone from guided access by putting in the passcode. If you do not have the passcode, simply restart the device.

9. How do you restart guided access on iPhone?

Ans. You can restart guided access on your iPhone by first disabling it from the accessibility menu, and then again enabling it.

Why is guided access not working?

Guided access is a feature of iOS that allows users to restrict access to app features and content. It is designed to help people with disabilities, but it can also be used to help people with other needs, such as those who need to focus on a task or who are easily distracted.

However, guided access is not working as intended for many users. There are a number of reasons for this, including the following:

-The feature is often difficult to set up and use.

-It can be easy to accidentally disable or exit out of guided access, which can be frustrating.

-Many apps are not compatible with guided access, which limits its usefulness.

-Some users find that guided access actually makes it more difficult to use their devices, rather than helping them.

If you are having trouble with guided access, there are a few things you can try to do to improve the situation. First, make sure that you understand how to set up and use the feature. It can be helpful to watch a tutorial or read a guide.

Next, try to use apps that are compatible with guided access. This will make it more likely that the feature will work as intended.

Finally, remember that you can always turn off guided access if it is not working for you. Sometimes, it can be helpful to use the feature for a short period of time and then turn it off when you no longer need it.

Have you contacted Apple Support or your carrier for help?

If you're experiencing technical difficulties with your iPhone, you may be wondering whether you should contact Apple Support or your carrier for help. The answer to this question depends on the nature of your issue and what kind of support you need.

If you're having trouble with a specific app, for example, you may want to contact the app's developer directly. If you're having general performance issues, however, contacting Apple Support or your carrier may be the best course of action.

If you need help troubleshooting a hardware issue, contacting Apple Support is likely your best bet. Apple's support team can help you diagnose problems and determine whether they're covered by your warranty.

If you're experiencing problems with your carrier's service, on the other hand, contacting your carrier's customer service department is the best way to get help. Carrier customer service representatives can help you troubleshoot issues and make changes to your account, if necessary.

No matter who you contact for support, be sure to have as much information about your issue as possible. This will help the support team determine the best way to help you.

Related Questions

How to fix guided access not working on iPhone?

There are several ways to fix guided access not working on an iPhone. First, you can restart the device. If that doesn't work, you can disable guided access. If that still doesn't work, you can try repairing or resetting the iOS system. Finally, if all of those methods fail, you can restore your iPhone from backup.

What is guided access and how to use it?

Guided Access is a feature available on iOS devices that allows you to restrict access to specific features within an app. For instance, if you want to limit a child's access to certain apps, or prevent yourself from exiting certain software, guided access is the perfect option.

How do I Turn Off guided access on my Device?

To turn off guided access on your device, triple-click on the Home button and enter your passcode. After entering the code, click on the End button. If you have entered a Face ID or Touch ID as a passcode for guided access, then double-click on the Home button and disable the guided access session.

Is guided access triple click not working on iPhone?

There are a few different reasons why your Guided Access triple click not working on iPhone. The first possibility is that you don't have a passcode set up on your device, in which case Guided Access will not be able to open the app. The second possibility is that your iPhone's accessibility settings may prohibit Guided Access from working. If you're having trouble opening an app because of a physical disability, you can always try contacting the app's developer and asking for support. If you're having difficulty opening an app because you forgot the passcode or your iPhone's accessibility settings prohibit it, there's nothing you can do except reset your device and set up a new passcode.

How to fix guided access not working on iPhone without data loss?

1. Restart/Force Restart iOS Device This is the most common and straightforward way to fix guided access not working on iPhone without data loss. Simply restart your iPhone and try again to use guided access. 2. Disable Guided Access Method If you're currently unable to access your iPhone's Home screen using the traditional keyboard and mouse setup, you can disable Guided Access using your device's Settings menu. This way, you'll be able to use the standard touchscreen interface on your iPhone. 3. Repair iOS System to Fix Guided Access Not Working without Data Loss If neither of the above methods work to fix guided access not working on your iPhone, you can attempt a Repair or Restore operation. These are lengthy and often complex processes that may result in data loss depending on the nature of the issue. We recommend consulting with a professional if Yukong Wu cannot resolve the problem using one of these methods.

How to fix guided access broken on iPhone and iPad?

If restarting or force restarting your iPhone/iPad does not solve the problem, you may need to resolve the issue with Apple's support.

How do I Turn Off guided access on my iPhone?

On an iPhone 7 or iPhone 7 Plus: Press and hold both the Side and Volume Down buttons for at least 10 seconds, until you see the Apple logo. On an iPhone 6s and earlier, iPad, or iPod touch: Press and hold both the Home and the Power/Sleep buttons for at least 10 seconds, until you see the Apple logo.

What is guided access on iPhone or iPad?

Guided Access is a feature on iPhone and iPad devices that lets you limit the device's functionality to a single app. For example, you could use it to prevent your child from using the phone to make calls or send texts, while allowing them access to games and other apps. You can also lock the device so that no one except the person who set up Guided Access can use it.

What is guided access on iPhone?

iPhone Guided Access feature is an accessibility feature that disables all gestures, taps, button presses and any other activity on your iPhone outside those required for your current app. In other words, it allows access to a single app.

How do I enable guided access on my screen?

On an iPhone or iPad, go to Settings > General > Accessibility. Under Guided Access, turn on Guided Access. On a Mac, use System Preferences > Accessibility > Guide Buttons. Enable the "Guided Access" checkbox and enter your passcode.

Where is the guided access menu in the Settings app?

You find the Guided Access menu by going to Settings > General > Accessibility > Guided Access. It's the last item in the menu screen of Accessibility, so be sure to scroll all the way down.

How do I give guided access to my child's apps?

There are a few ways to give guided access to your child's apps. You can either launch the app yourself, or you can use Guided Access on your device. Launch the app first and triple-click the Home button to open the Guided Access feature. From here, you can select specific areas of the app that you want your child to have access to.

How do I Turn Off guided access mode?

To turn off Guided Access mode, you will need to enter your 6-digit passcode. Alternatively, you can disable Guided Access by using Face ID or Touch ID. If you have forgotten your passcode, please contact Apple Support.

Use Guided Access with iPhone, iPad, and iPod touch

To assist the community in replying, you might consider providing more information about what you're experiencing. Including the following details in your post may be helpful:

- What's happening? If you receive an error message, what does it say?
- What device is this happening with?
- Are you able to reproduce the issue on another device? What actions do you take to reproduce it?
- Does this happen in all apps, or only with one in particular?

Thank you for posting in the Apple Support Communities.

Jul 11, 2021 5:36 PM in response to Erin_B11

I have enabled Guided Access and the triple click does nothing anymore. It worked on previous iOS.

Jul 17, 2021 9:44 AM in response to Ymss

I have the same issue with an iPad Pro 11" M1. Is there another way to enable other than the top button?

Jul 20, 2021 5:20 AM in response to Ymss

Yes it used to not come with the triple click at all after some work around now it is coming but it does nothing at all. Hope this is fixed by 14.7 update which I'm installing now

Jul 20, 2021 5:30 AM in response to Princepannu75

Possible source of difficulty:

It's possible to have the "Triple Click Accessibility Shortcut" OFF while Guided Access is ON.

Not sure if this was so pre-14.6.

Aug 15, 2021 4:52 PM in response to Princepannu75

Im facing it right now does anyone know how to fix it ? I tried eveything I even factory reset my phone but still not working. help!
